PPA UPDATED

JULY 19, 2014 | ZLEAP

PPA for the JWM Settings manager has been updated

What has been fixed

EASY TO FIX:

Previews of themes do not exist, as I changed some things around, but didn't set those to the install location the user will have (they still

point to my testing directories)

There is currently no way to use keyboard modifiers to set the keys...

you still need to do this manually

MEDIUM:

Add in args to pass from Terminal for recovery (i.e.

jwm-settings-manager --recover or --default or --restore or.....), and

possibly for launching each 'app' individually. Also add a man page to

describe this.

Panel

-make add network indicator add in the wicd to startup

-make add volume indicator add in volumeicon to startup

The Ubuntu version of JWM doesn't seem to allow jpeg backgrounds no matter which libjpeg I install.. so I will have to (temporarily,

until
this is sorted out) make Rox handle Jpeg backgrounds.
The workaround is to enable icons on the desktop and then you can
use a
jpeg.

HARDER:

The fonts have to be typed in by hand, I have not found the best
solution for a 'font-picker' yet, so this is still in the works
I need to eventually be able to handle X-11 color names as, JWM
supports
this, and if a user installs this apart from ToriOS, they may have
X-11

color names instead of Hex Triplets.

I either need to write a function to parse the rgb.txt or look for a
system library that does this already. So this needs some research,
and
decision.

There is currently no REALLY good battery indicator for JWM in the
Ubuntu repos. I have downloaded the source for Puppy's battery
monitor... but I have yet to compile/test/etc...

This is something we need to look into more, and decide on
eventually.

If the puppy battery monitor works, then we can just use it unless
someone has a better idea.

OFFLINE MANUAL STATUS

JULY 13, 2014 | ZLEAP

July 13 2014

I am slowly working on this, the latest build of the pdf manual is at

<https://github.com/zleap/torios-manual>

so grab this with

git clone <https://github.com/zleap/torios-manual>

or with

git pull if you have already grabbed this, I have tried to put the dates into the filename so you can see which is the latest format.

Date is in UK dd/mm/yyyy format

Thank you!

WEEKLY MEETING #2

JULY 12, 2014 | ZLEAP

Hi,

As **announced earlier**, ToriOS Team had its weekly meeting on 12th July 2014 at 19:00 GMT.

Here is the **log/minutes of the meeting** 😊

Thank you!

WEEKLY MEETINGS

JULY 12, 2014 | ALI LINX

Hi,

As published earlier about some [changes within ToriOS](#) Community, here is one of these changes 😊

Each **Saturday**, ToriOS Team will have a weekly meeting at **19:00 GMT** – [here is a website](#) that will help you for time conversion.

Last week, we had our first weekly meeting – [here is the log](#).

As per last week meeting, several changes will take effect and hopefully soon, we shall communicate these changes 😊

Everyone who is interested in ToriOS Project is more than welcome to attend our meeting as these are not private and we do that on a public area 😊

For more information, [please see this page](#).

Thank you!

CHANGES WITHIN TORIOS PROJECT

JULY 8, 2014 | ALI LINX

Hi,

Needless to say, we feel guilty for not communicating with the outside world and the main reason is real life. We would like to apologize for that.

On Sunday, 6th of July, 2014; we had a meeting and we have agreed and decided to carry on with some changes mainly within our community/team.

Very soon hopefully, we shall communicate more details. This post just to say we're very much alive and active so stay tuned 😊
